ABOUT ME

I am Beloo Gajjar, currently in 8th semester, pursuing my degree from Sal School of Architecture, Ahmedabad. I have completed my Internship under Ar. Yatin Pandya sir in Footprints E.A.R.T.H. My approach to design is centered on making spaces that uplift people's experience. As a part of it I try to experiment with different levels to create visually connected spaces that are in harmony with nature.

EDUCATION

Bachelor of Architecture | Ongoing Sal School of Architecture, Ahmedabad

Higher Secondary | 2021 K.R.Raval School Ranip, Ahmedabad

Secondary | 2019 K.R.Raval School Ranip, Ahmedabad

HANDS ON SKILLS

Sketching
Painting
Clay Sculpture
Hand Drafting
Model Making

Supplementary Skills 20

Institute Design

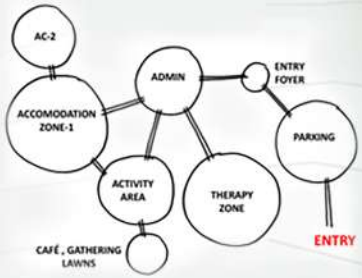
De-Addiction Center

PROJECT- Academic 5th sem, 2023

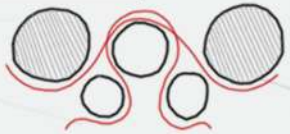
The studio aimed to design a Rehab Center for De-Addicted patients. This 'AROGYA' Deaddiction Center is situated in a natural setting and emphasizes its multi-level funtioning. Instead of having a single, monolithic structure, the site includes several smaller, visually related structures.

THE SITE

The site provided to us was a 9100sq.m heavily contoured land beside Manav Gulzar School, Behrampura.

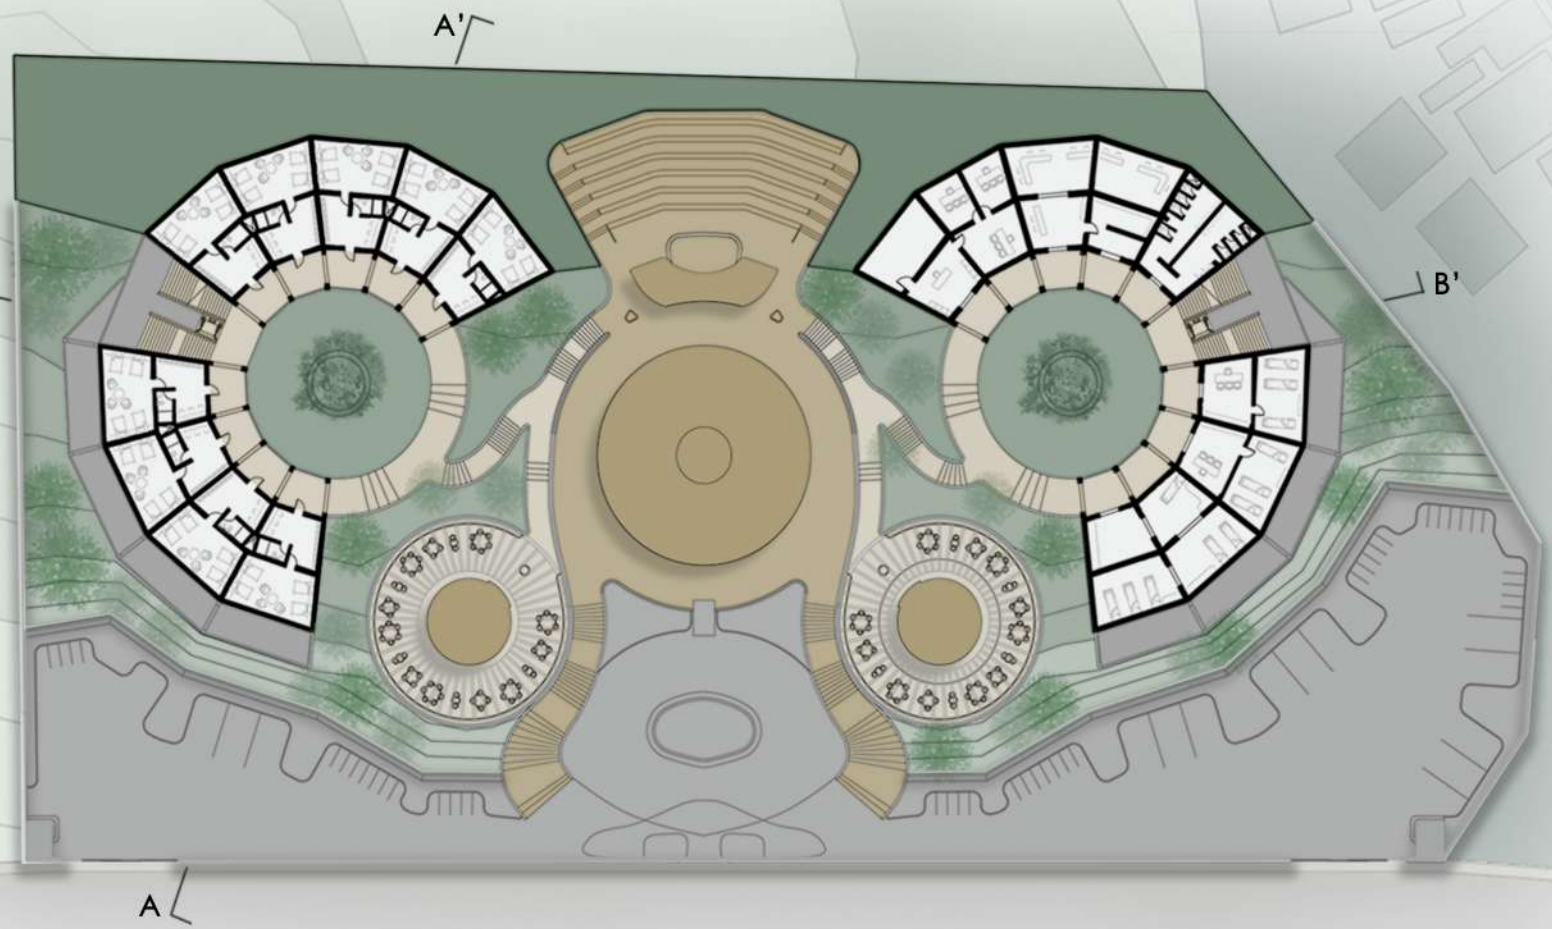


PROCESS



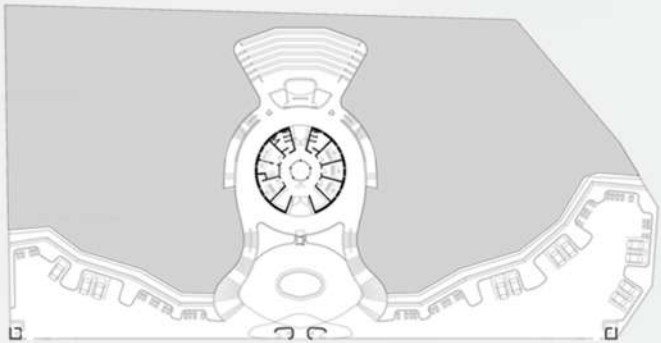
My basic plan was to fragment the buildings so that each function has its own degree of privacy.

I've made an effort to preserve the uneven hardscape of the land ,which helps the building to stand outfrom its surroundings.

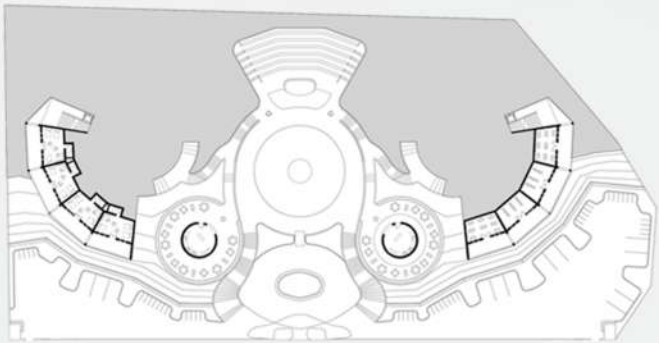


Plan at LVL +12.5m

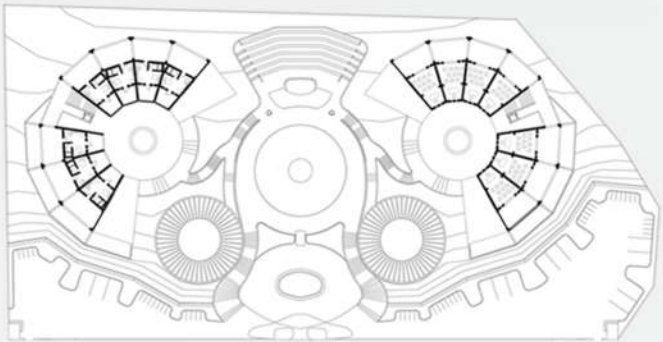
Dimension of the site is 127*71m



Plan at LVL +6.5m



Plan at LVL +9.5m



Plan at LVL +15.5m

Bella stone blocks are the wall material ,that I have utilized for the design, which are suitable in Ahmedabad's hot climate. Additionally, an interesting trip is observed, going from open pathways to semi-open pergola seatings to closed spaces.

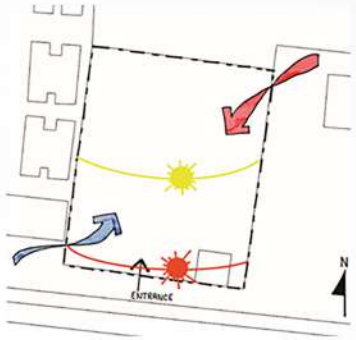
Housing Studio

Residential Society

PROJECT- Academic 4th sem, 2023

We were given the studio brief to build a residential housing society of 30-45 units of 1, 2 and 3 BHK. Creating this design my main focus falls on the connectivity and community spaces giving terraces with pergolas surrounded by fragrant flora.

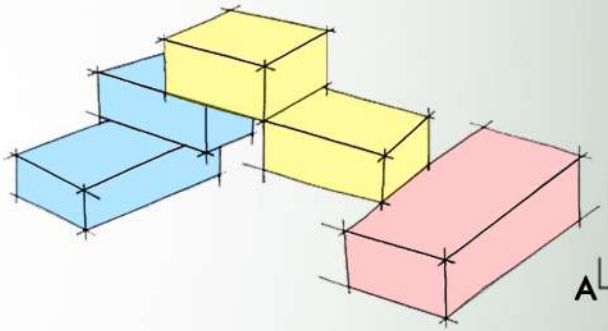
THE SITE

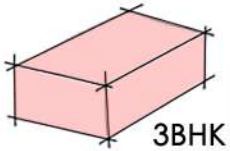


Site Dimentions- 83.6 X 101.4m
Site Area- 8477sq.m
No contours i.e flat land
Accessiable only through a road from south
Location- near Vaishnodevi circle, Ahmedabad city

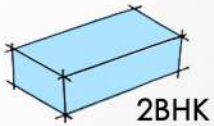
FORM DEVELOPMENT PROCESS

Basic concept was to stagger the units, which I did by arranging them both vertically and horizontally to create distinct areas while still adhering to the column grid.

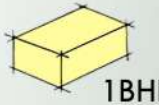




3BHK



2BHK

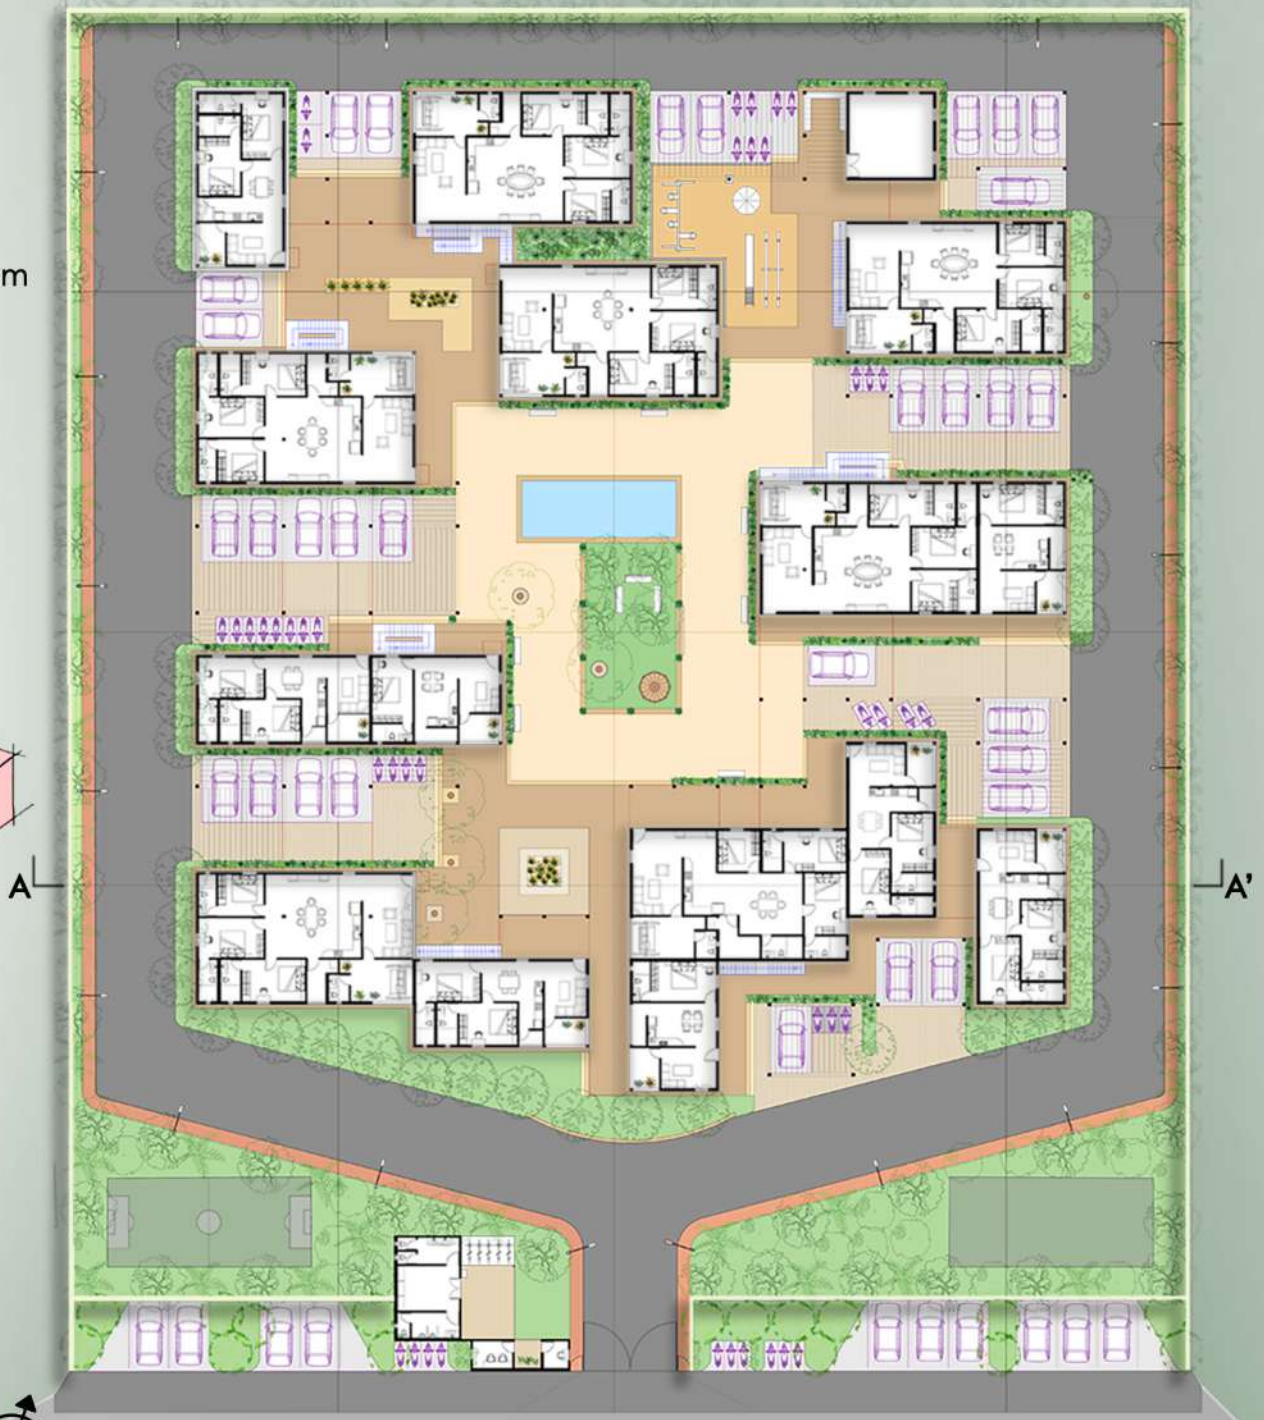


1BHK

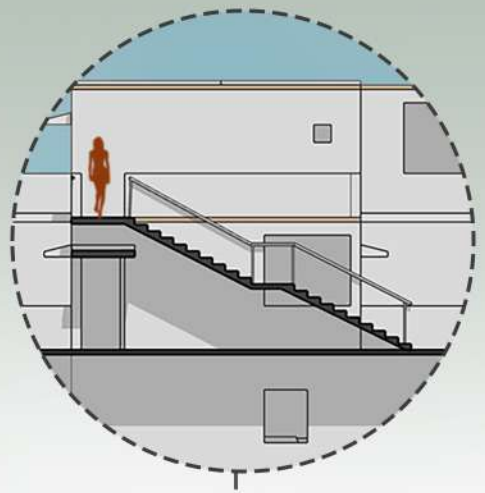
To seperate the residence from chaos of the main highway road, a green belt is provided at the beginning.

This frame structure has pergolas at multiple levels, thus shows a good play of light in the internal spaces as well as on terraces.

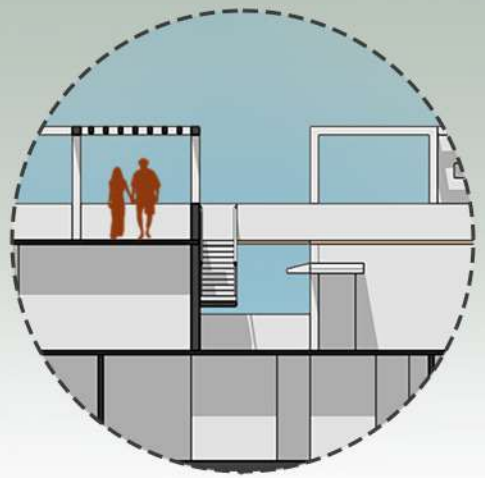
A road surroundes the houses which provides easy exit and entry.



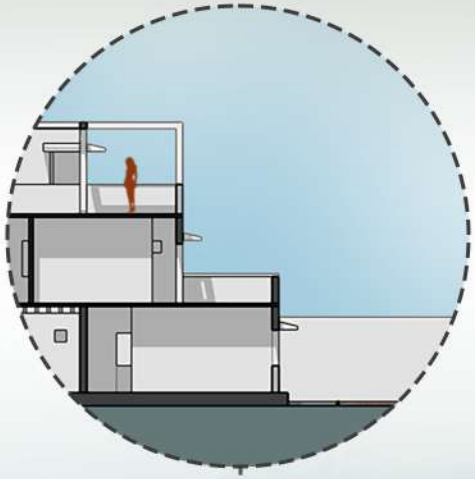
Ground Floor Plan



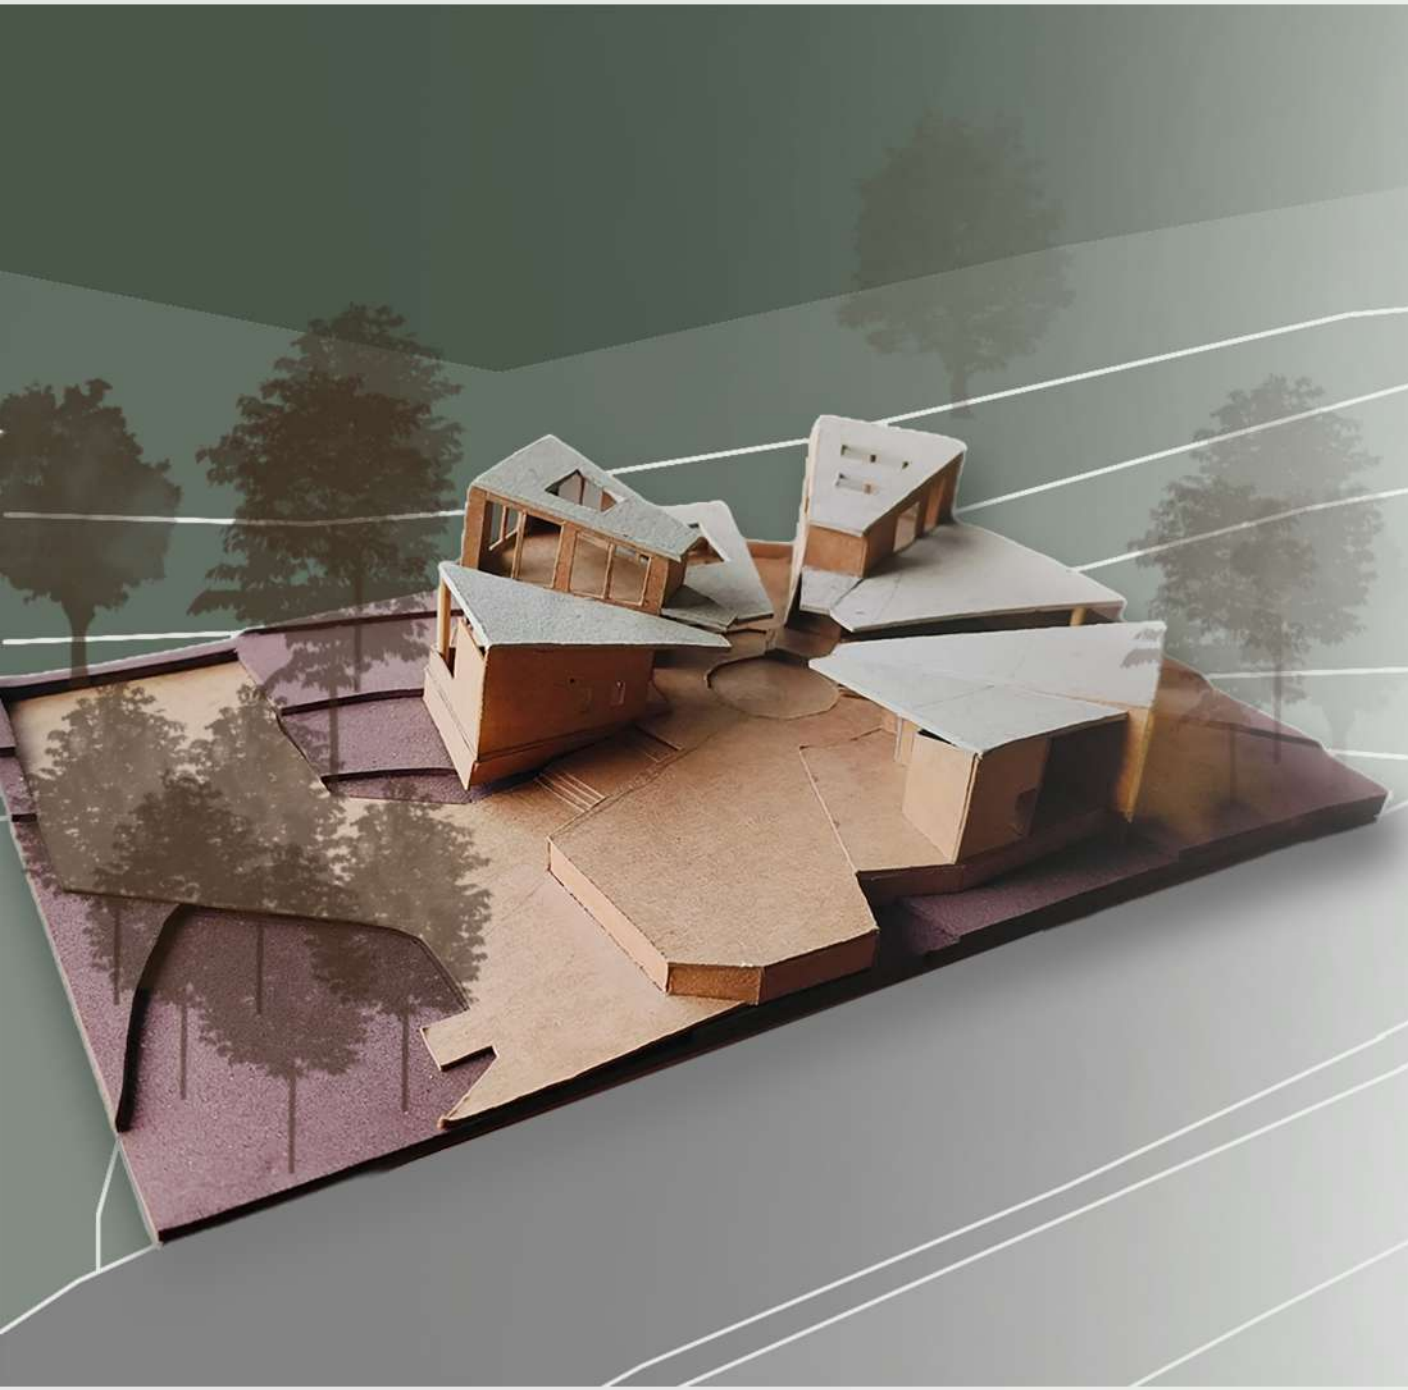
Play of light and shadow can be seen in the central spaces, common seatings as well as in the parking area.



Different levels can be seen in the section which shows vertical circulation as well as roofs with pergolas.



Section AA'



Climate Studio

Small scale institute design

PROJECT- Academic 3th sem, 2022

The site was a contoured land in the heart of Panaji, Goa. The program given to us was designing a exhibition and workshop of a local art of the state. My selected art was the seashell craft, a well-known art of Goa. The haphazard roof of the different fragmented structures were focused in the middle. This strategy of rain water harvesting helps in dealing with the mostly rainy season of Goa.

Referential Studio

Reference-Smith House

PROJECT- Academic 2th sem, 2022

The studio Includes studying a project of a particular architect, understand his design philosophies and propose a seperate design taking inspiration from it. My building to study was The Smith House by architect Richard Meier. After making a detailed analysis on his work, the final design has been made.

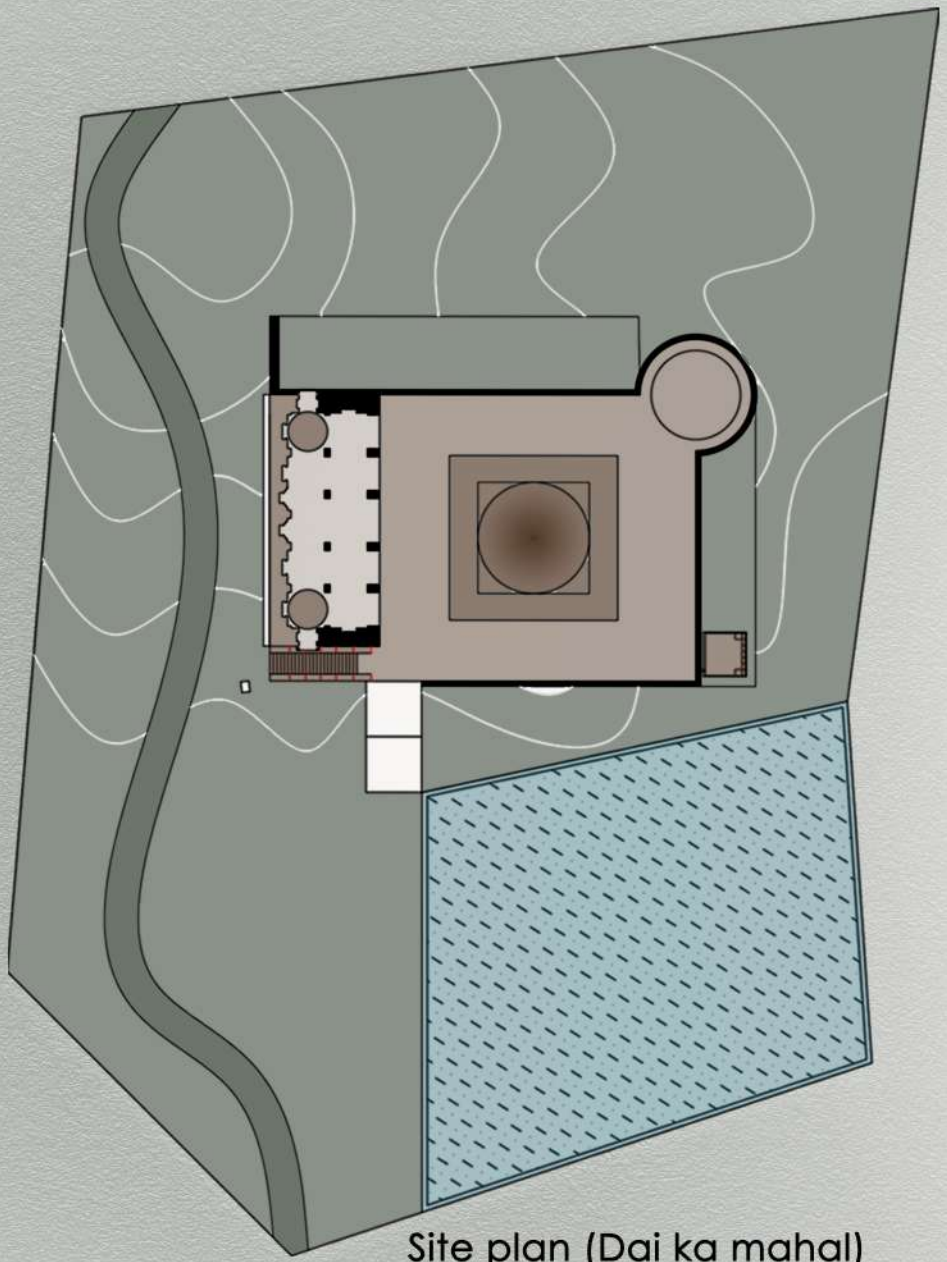
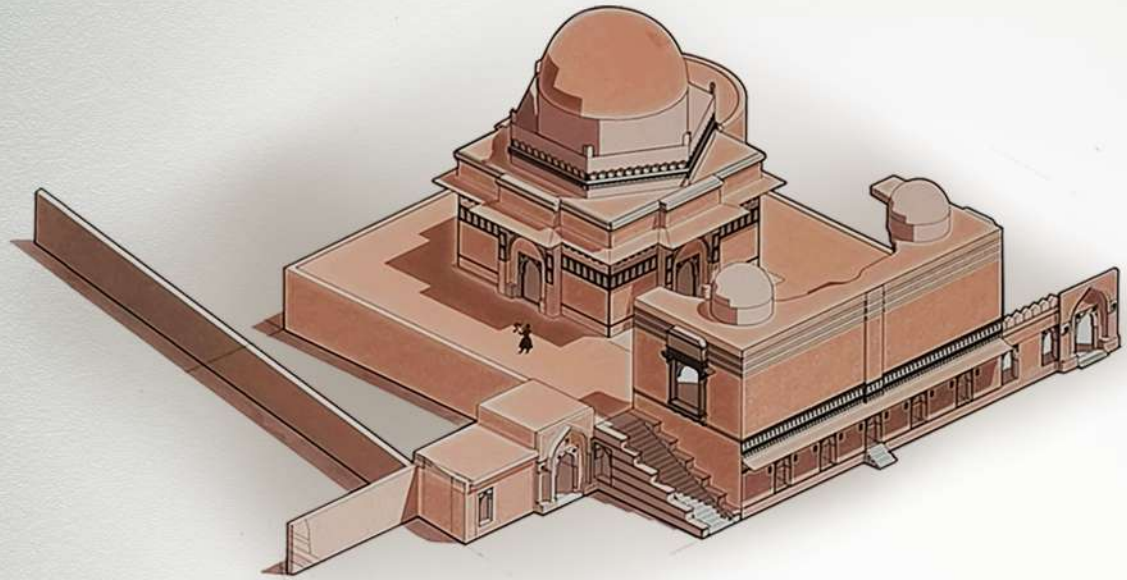
RSP Mandu, Madhya Pradesh

PROJECT- Study of Indo-Islamic Architecture, 2023



Site plan (Dai ka mahal)



Mandu or Mandavgarh is an ancient city in the present day Mandav area of the Dhar district. The primary objective of this RSP was to understand design elements of Indo-Islamic Architecture.

Among other monuments that we visited like Jahaj Mahal, Baz Bahadur Palace, Jami Masjid, Hoshang Shah's Mahal, we had documented The Dai ka Mahal.
